

Rottfella roller-ski bindings 2015

Xcelerator Rollerski 2.0

Xcelerator Rollerski 2.0 has been created to give the customer the best skiing feeling on roller skis while maximising safety. The bindings are available in either skate style or classic style, both with security screws.

Package

- Xcelerator Rollerski is supplied in bulk packs of 10 pairs.
- Each pack contains:
 - 10 pairs of bindings and heels
 - 40 self-tapping security screws
 - NIS keys
 - 40 loose flexors

Mounting

- The binding is mounted according to the mounting instructions enclosed in the pack.
- It is very important that TWO screws are fitted in all bindings, as shown in the illustration, before the flexor is mounted.
- The supplied security screws are self-tapping, so it is not necessary to drill holes for them first.

Partners

- We work together with the leading suppliers of roller skis on the market to provide customers with the best possible products and make mounting bindings in store quick and easy. The manufacturers on the list can supply roller skis with prefitted mounting plates or integral NIS plates.

Rottefella roller-ski partners

- Alpina
- Swenor
- Elpex
- Fischer
- SRB
- Marwe

Xcelerator mounting plate

For roller skis that come without a mounting plate or NIS plate, a mounting plate must be fitted before mounting the binding. This plate is the same as for winter skis, and so the binding can be moved to the desired size.

Supplied in bulk packs of 10 pairs of plates with screws.
