

New!

XCELERATOR™
ROTTEFELLA TECHNOLOGY

A new generation
Nordic racing binding

ROTTEFELLA®

Xcelerator

New technology for faster skiing

Lighter

40%

Through efficient design and new technology, we have reduced the weight by up to 40% from the previous racing bindings. The weight reduction gives the skier a greater sense of control and speed.

More control

Precise contact with the ski provides better ski control and facilitates efficient skiing. This saves energy and makes it easier to adopt an optimal skiing technique.

Better power transmission

hk+

More efficient transmission of power secures a more forceful classical kick and skating control slide. Increased precision in the power transmission from skier to surface increases the speed, efficiency and joy of dedicated skiing.

Powered by you.

Xcelerator Skate and Classic, a new generation Nordic ski bindings. New technology allows greater speed and enhances the skiing experience. The weight of the binding is reduced by 40%, which really makes a difference in the forward movement of the ski.

Xcelerator Classic

Xcelerator Skate

Technology by us.

Technical info:

Weight: 175 g pr. pair

Width: 56,5 mm

Safety: security lock in front

Opening angle: 40°

Size: one fits all (35-52)

Ball of the foot rotation point: 1,8 mm

Material: advanced plastic and stainless steel

Fits all NIS plates except Nemo

Xcelerator Flex (classic & skate)

New flex technology for Xcelerator skate and classic makes it easy to personalize your binding. You can change flex for different conditions and your personal style.

You can choose between three different flexes: Standard (black) for normal conditions, Hard (blue) for cold conditions and Soft (red) for warm conditions.

Xcelerator Skate Spacer

Xcelerator Skate Spacer gives you better power transmission and higher speed. Fits all NIS-plates and Xcelerator bindings.
